**RECTANGULAR SHAPED GEMSTONE ARRANGEMENT FOR
ATTACHMENT TO A PRONG-TYPE SETTING**

FIELD OF THE INVENTION

The present invention relates to a multi-gemstone arrangement for attachment to a prong-type setting. More particularly, this multi-gemstone arrangement includes four (4) gemstone sections each being triangular-shaped for forming a rectangular-shaped gemstone arrangement. This combined rectangular shape gemstone arrangement gives a larger appearance than that of a single rectangular gemstone of a similar carat weight.

BACKGROUND OF THE INVENTION

Invisible gemstone settings are well known in the art and refer to a setting for gemstones in which the setting lies beneath the visible surface of the gemstones. Typically, to invisibly set a large number of gemstones, the approach of the prior art has been to notch the gemstones and to mount them in a setting having two or more parallel walls, with metallic projections, for example, prongs or the like, protruding from these walls for engaging the notches. Generally, these walls define channels in which the gemstones are set abutting one another in accordance with the invisible mounting method.
